The Cashmatic Premium automatic cashier represents a new response to the most demanding requirements, created to manage cash flows in the intermediate market segment. It can be remote-controlled with a wireless device such as a smartphone, tablet or pc. It communicates through a built-in display.

It permits total control over the operator's actions, eliminating errors and cash losses, and the customer's actions, through automatic detection of counterfeit money; it optimises cash point management by automatically giv-

ing change and eliminating the need to count cash when opening and closing the cash desk and changing shifts. Its small size and versatility, permitting separation of coin and banknote modules, facilitate installation on any work counter. Its robust steel structure, the elimination of the need to open the drawer and and notification of the presence of the automatic Cashmatic device make it impossible for the cashier to access the cash, represent a strong deterrent to robbery.
